# ANSWERS FOR ANY APPLICATION

ARTECHE instantaneous auxiliary relays are monoestable relays, whose contacts change instantaneously from non-working position to working position when its coil is energized, coming back these contacts to the initial non-working position when the coil is no more fed.

ARTECHE instantaneous auxiliary relays range are designed perform optimally even in the hardest working environment.

The design, durability and quality of the different alternatives that ARTECHE instantaneous relays can offer, make them suitable for high responsibility controls in different areas, highlighting:

## ELECTRICAL UTILITIES:

### Power plants, electrical substations.

- › Direct operation on MV / HV primary equipment.
- › Galvanic isolation between the control system and the primary equipment.
- › Applications where high speed operation is a must.
- › Applications where high breaking capacity is required.
- › Tripping functions.
- › Contact multiplication in control systems of HV / MV installations and power plants.
- › Low duty loads control, activate digital inputs.
- › Specific relays for Nuclear Power Plants.

## INDUSTRIAL SECTOR:

### Continuous process industries (Concrete, iron industries), water treatment, ...

- › Critical process surveillance.
- › Alarms for signalling and telecontrol.
- › Galvanic isolation between the control and the power systems.
- › Low duty loads control, activate digital inputs.

The great power withstand of the contacts makes possible direct operation on primary equipment, because their making/breaking capacities, continuous through-current and overvoltage capacity offer an enhanced operational safety and reliability.

# GENERAL CHARACTERISTICS

The main features of ARTECHE's instantaneous auxiliary relays are the followings:

- › Designed to allow continuous operation even in high temperature ambient, within the whole voltage range.
- › Self-cleaning contacts.
- › High level of electrical insulation between circuits.
- › Availability of extended voltage range (+25/-30%) for high security applications.
- › Capable to operate under low duty loads, activate digital inputs, and operate without any load.
- › High speed operation (up to 3 ms).
- › Tested to comply seismic standards (EN 61373; IEEE 344; IEEE 323; IEEE C37.98 Standards).
- › Sturdy design.
- › Including an internal diode to avoid damaging the relay when connecting with inverse polarity.
- › High protection degree (IP40), with transparent cover, making them suitable for use in salty and tropical atmospheres.
- › In compliance with the most demanding test standards: IEC, EN, IEEE and bearing the CE and UL marks .
- › Wide range of auxiliary voltage levels (Vdc and Vac).
- › Versatile installation (plug-in relays in a wide range of sockets with different installation configurations).
- › Capable to work under ambients with relative humidity around 100%.
- › Maintenance free.

In addition, the different number of alternatives available to select the equipment, both technically (increase of the breaking capacity by serial contacts, high speed operation of the output contacts, possibility of adding different options to the relay) and in the way of mounting (front, rear or flush mounted sockets, with screws or fastons) must be considered.

# TECHNICAL STANDARDS

## GENERAL STANDARDS

In addition to the specific applicable standards, ARTECHE auxiliary relays are designed to comply with the following standards:

- › **IEC 61810:** Electromechanical all-or-nothing relays.
- › **IEC 60255:** Electrical relays. Measuring relays and protection equipment.
- › **IEC 61812:** Specified time relays for industrial use.
- › **IEC 60947:** Low-voltage switchgear and controlgear.
- › **IEC 61000:** Electromagnetic compatibility.

E322124

**UL Recognized Component Marks for USA and Canada:** The combined UL signs for the USA and Canada are recognized by the authorities of both countries. All auxiliary relays identified with this mark meet the requirements of both countries.

# RANGE OF PRODUCTS

## GENERAL PURPOSE INSTANTANEOUS AUXILIARY RELAYS

ARTECHE's general purpose instantaneous auxiliary relays are designed to directly operate to the tripping and control circuit.

Their pick-up time lower than 20 ms and the high breaking capacity of their contacts make them appropriate to be used as an interface between the protection system and the breaker. Furthermore, its multiple output contacts permit the use of these relays in control and signalling applications as well as direct operation on HV and MV primary equipments.

## AUXILIARY TRIPPING INSTANTANEOUS RELAYS

ARTECHE offers specific relays intended to be used in tripping applications, where the requirements of pick-up time (with models that assure the trip even in less than 3 ms) and the breaking capacity are demanding, as the trip of HV and MV breakers.

These relays include a standard front LED that indicates when the relay is fed.

Relay trip flag is available, which indicates when the relay has operated, as a memory state.

All the relays include a diode in parallel with the coil (see auxiliary relays with overvoltage protection characteristic) and comply with the shock and vibration standards, related to the relays with seismic characteristics.

## AUXILIARY INSTANTANEOUS RELAYS WITH SEISMIC CHARACTERISTICS

They are designed in order to properly perform under frequent vibration and shock applications, as railway sector, or because of safety requirements as nuclear power plants.

They comply with the extended voltage range (+25 / -30 %).

The sturdy design of our equipment, with a higher intrinsic pressure between contacts, permits to withstand vibrations without penalizing the good performance of the relays.

## INSTANTANEOUS AUXILIARY RELAYS WITH COIL OVERVOLTAGE PROTECTION

ARTECHE's auxiliary relays, either Vdc or Vac, have the possibility of including an element in parallel with the coil (diode or varistance).

In applications where overvoltage is to be avoided and drop-out time is not important, it is recommended to use diode. Otherwise, varistance is more advisable.

These elements are aimed to discharge the energy of the coil when the relay is not longer energized.

These relays are indicated when the customer wishes to protect the contact of the equipment that commands the operation of our relay, providing a longer durability of the whole protection and control system.

# BREAKING CAPACITY

› With devices operating worldwide, also heavy industries like oil & gas sector trust in our relays.

# BREAKING CAPACITY

The breaking capacity is a critical parameter on the design and the applications of the relays. Its mechanical life could be considerably reduced, depending on the value of the load (especially with heavy duty loads), the number of operations and the environmental conditions in which the relay is operating.

In any configuration, ARTECHE's auxiliary relays have a high breaking capacity values. These limits are shown in the table below, in terms of power and current values. In all the cases, these relays guarantee a right performance during 50,000 operations.

Likewise, the values shown in the following charts have been obtained in standard conditions in the laboratory, and they could be different in real conditions. In any case, the possibility of connecting serial contacts or a higher distance between contacts makes these values to be considerably increased.

## 24 Vdc voltage Different loads configurations.

### Resistive load:

› L/R= 0 ms.

### Highly inductive load:

› L/R= 40 ms.

— Type A (Distance between contacts = 1,8 mm)  
— Type B (Distance between contacts = 1,2 mm)

Vdc	Contact configuration	0 ms		20 ms		40 ms	
		P(W)	I(A)	P(W)	I(A)	P(W)	I(A)
24	Type A	500	20,83	370	15,42	250	10,42
	Type B	450	18,75	300	12,50	210	8,75

## 110 Vdc voltage Different loads configurations.

### Resistive load:

› L/R= 0 ms.

### Highly inductive load:

› L/R= 40 ms.

- Type A (Distance between contacts = 1,8 mm)
- Type B (Distance between contacts = 1,2 mm)
- 2 Contacts Type A
- 2 Contacts Type B

Vdc	Contact configuration	0 ms		20 ms		40 ms	
		P(W)	I(A)	P(W)	I(A)	P(W)	I(A)

## 220 Vdc voltage Different loads configurations.

Vdc	Contact configuration	0 ms		20 ms		40 ms	
		P(W)	I(A)	P(W)	I(A)	P(W)	I(A)
220	Type A	150	0,68	115	0,52	66	0,30
	Type B	125	0,57	104	0,47	60	0,27
	2 Contacts Type A	319	1,45	234	1,06	134	0,61
	2 Contacts Type B	242	1,10	177	0,81	100	0,45

## HOW TO SELECT THE CURVE OF MY RELAY

These charts show the breaking capacity values, either for resistive and highly inductive loads, in three voltage values of reference (ask for other voltage values). The charts show four different curves:

- › Type A: Breaking capacity of the relays with distance between contacts = 1.8 mm.
- › Type B: Breaking capacity of the relays with distance between contacts = 1.2 mm.
- › 2 contacts type A: Breaking capacity for relays with serial contacts, and distance between contacts=1.8 mm.
- › 2 contacts type B: Breaking capacity for relays with serial contacts, and distance between contacts=1.2 mm.

The distance between contacts is shown in the tables of technical data.

## HOW THE BREAKING CAPACITY CAN BE INCREASED

ARTECHE's auxiliary relays are power relays, designed specially to have a high breaking capacity. Thus, there are applications where the loads are so high that it is necessary to even increase the breaking capacity, keeping the reliability of the contacts of the auxiliary relays.

Recommendations to increase breaking capacity:

- › Connect contacts in series. The breaking capacity is increased considerably, guaranteeing the right performance during a high number of operations. See curves for two contacts.
- › Use ARTECHE range of contactors. See ARTECHE contactors catalogue for more detailed information.

## LOW DUTY LOAD CAPABLE RELAYS (LDL)

There are some applications where the relay contacts establish circuits where the driven current is intrinsically low and are very dependent upon the voltage applied. In this kind of use, if the voltage applied to those kind of circuits differs (even slightly) from the one already specified, the circuit energisation fails. One of these cases is when we use relays to activate digital inputs. In these situations is necessary to minimise the contact resistance in the relay. To achieve that, while the relay is manufactured, its contacts are submitted to a special conditioning to make its contacts resistance extremely low.

Varistance in parallel with the coil		V				0**	0	0	0	1	
With seismic characteristics and coil overvoltage protection range											
Seismic with diode in parallel with the coil (only Vdc)****		SYDI				0**	0	0	0	1	
Seismic with varistance in parallel with the coil****		SYV				0**	0	0	0	1	
Range											
Duty loads***	No			-							
	Yes			LDL							
Aux. Supply Vdc or Vac											
Indicate voltage level and if it is VDC or VAC (ex: 24 VDC)											
Options											
Front LED	No							0			
	Yes							1			
Mechanical contact position indicator	No								0		
	Yes								1		
	Inverse*****								2		
Trip flag	No									0	
	Yes									1	
Push to test button	No										0
	To push the contacts										1

Standard model

\* Indicate just if LDL range is required.

\*\* Mandatory option.

\*\*\*\*Option not available for the RJ-8 OPOX2XX.

\*\*\*\*\*Option only available for the RJ-8.

# DIMENSIONS OF THE RELAYS

## RETAINING CLIPS

RETAINING SPRING	OP SOCKET	RELATED PLUGGED RELAY
E0	Universal (D and F sized sockets require 2 units ; J sized sockets require 4 units)	RD; RF; RJ; TDF; TDJ; VDF OP; VDJ OP Universal (Bag of 20 units) Universal (Bag of 100 units)
E41	DN-DE IP, DN-DE 2C IP	RD OP
E50	DN-TR OP, DN-TR 2C OP	RD OP
E40	FN-DE IP, FN-DE 2C IP	RF OP
E43	FN-DE IP, FN-DE 2C IP	TDF OP; VDF OP
E42	FN-TR OP, FN-TR 2C OP	RF OP
E44	FN-TR OP, FN-TR 2C OP	TDF OP; VDF OP
E31	FN-DE IP, FN-DE 2C IP	BF
E21	FN-TR OP, FN-TR 2C OP	BF
E45	JN-DE IP, JN-DE 2C IP	RJ OP
E47	JN-DE IP, JN-DE 2C IP	TDJ OP; VDJ OP
E46	JN-TR OP, JN-TR 2C OP	RJ OP
E48	JN-TR OP, JN-TR 2C OP	TDJ OP; VDJ OP
E29	JN-DE IP, JN-DE 2C IP	BJ; UJ
E27	JN-TR OP, JN-TR 2C OP	BJ; UJ
OTHER ACCESSORIES		
Security pins for RD; RF; RJ; TDF; TDJ; VDF; VDJ relays (bag of 100 units)		

› E\*\* retaining clips

# SOCKETS: DIMENSIONS AND CUT-OUT

Sockets		Options			Weight (g)
Relay	Type	Screw	Faston	Double faston	
RD	IP10 Front connection	DN-DE IP10		DN-DE2C IP10	60
	IP20 Front connection	DN-DE IP20		DN-DE2C IP20	60
	IP10 Rear connection	DN-TR OP		DN-TR2C OP	50
RF	IP10 Front connection	FN-DE IP10		FN-DE2C IP10	110
	IP20 Front connection	FN-DE IP20		FN-DE2C IP20	110
	IP10 Rear connection	FN-TR OP		FN-TR2C OP	90
	IP10 Flush mounting (short)	F-EMP CORTA OP			300
RJ	IP10 Front connection	JN-DE IP10		JN-DE2C IP10	225
	IP20 Front connection	JN-DE IP20		JN-DE2C IP20	225
	IP10 Rear connection	JN-TR OP		JN-TR2C OP	180
	IP10 Flush mounting (short)	J-EMP CORTA OP			400
RI	IP10 Front connection	I-DE			1000
	IP10 Rear connection	I-TR		I-TR2C	500
	IP10 Flush mounting	I-EMP			500
