## **Characteristics**

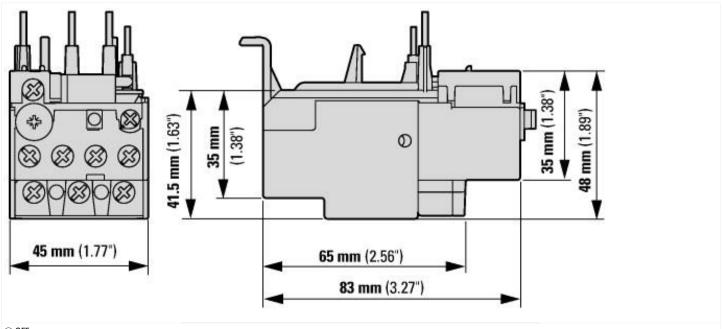

These tripping characteristics are mean values of the spreads at 20 °C ambient air temperature in a cold state. Tripping time depends on response current.

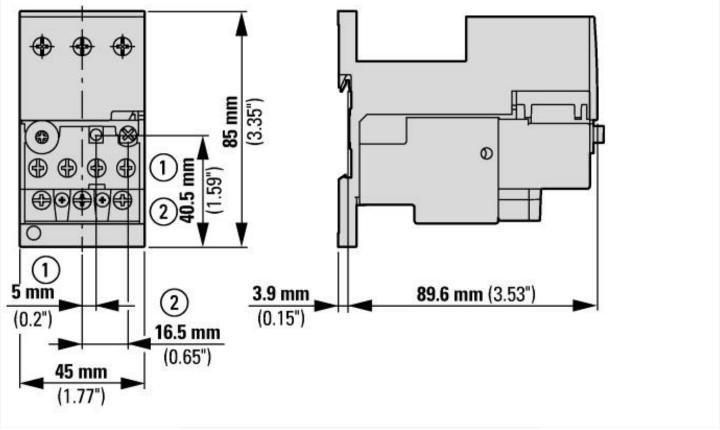

When the devices are at operational temperature the tripping time of the overload relay falls to approx. 25 % of the read off value. 1: Minimum level, 3-phase

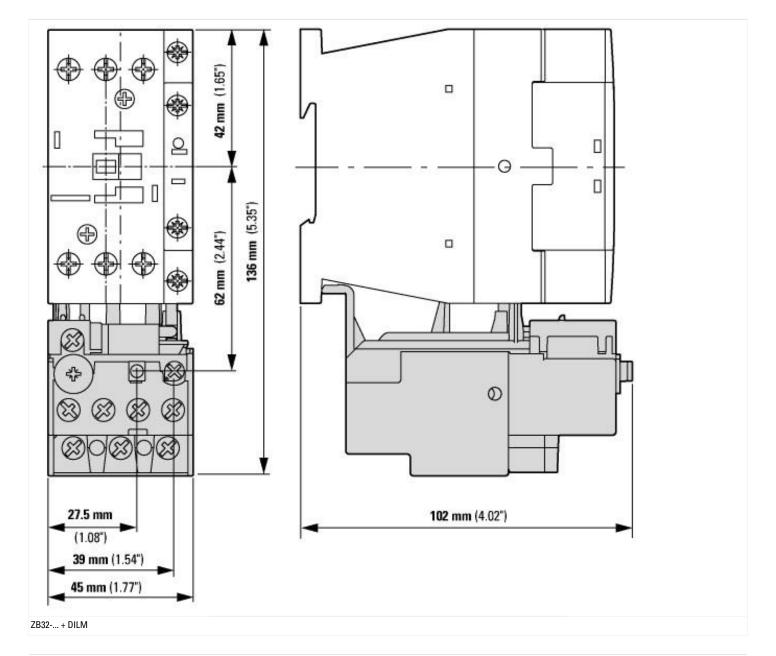

- 2: Maximum level, 3-phase 3: Minimum marker, 2-phase 4: Highest marker, 2-phase
